BARIATRIC AND OTHER WEIGHT LOSS PROCEDURES

DISEASES RESOLVED AFTER SURGERY

MINI LAPAROSCOPIC SURGERY

Mini Laparoscopic Surgery involves use of even smaller instruments as compared to routine Laparoscopic Surgery. This results in -

- Smaller Incision
- Lesser Pain
- Early Recovery
- Better long term cosmetic results
- Can be done without using any sutures on skin.

This technique is especially suited for young cosmetically aware people.

HIATUS HERNIA SURGERY

Hiatus Hernia is commonly seen on endoscopy but due to lack of facilities providing surgery for Hiatus Hernia, such patients frequently get neglected. At STAR we provide all types of surgeries for Hiatus Hernia.

Indications for Surgery

- Inadequate response to medicines or dependence on medicines for symptomatic relief
- Esophageal or respiratory complications
- Abnormalities on pH metry or manometry tests

LAPAROSCOPIC FUNDOPLICATION - GOLD STANDARD

- Food pipe and stomach is brought back to abdomen from chest
- Hiatus (from where food pipe enters abdomen via chest) is tightened
- Upper part of stomach (fundus) is used to create a new valve between food pipe and stomach
- This procedure gives immediate relief from reflux

STAR HERNIA SURGERY ADVANCED HERNIA CARE

At STAR we provide latest technology for all types of Hernia Care- Laparoscopic Surgery is used for almost all cases of Hernia--

- All Ventral Hernias - Epigastric, Umbilical, Infraumbilical etc.
- All Inguinal Hernias including recurrent hernias
- All types of Incisional Hernias | Lumbar Hernias
- Diaphragmatic Hernia | Hiatus Hernia
- Rare Hernias like Spigelian Hernia, Obturator Hernia
- Paediatric Hernia Surgery

Laparoscopic Hernia Surgery

- Small Cuts
- Less Pain
- Quick Recovery
- Less Recurrence
- Less Long Term Complications

ADVANCED LAPAROSCOPIC SURGERY

LASER SURGERY

- No Cuts
- No Blood Loss
- Almost Painless
- Very Quick Recovery
